FIRE SAFETY WEEK

Hitchcock Fire Department teaches the 2nd Grade Hitchcock/Tulare Elementary students about fire safety.

October is Fire Prevention Month! The goal of Fire Prevention Month (and week October 8th - 14th) is to raise fire safety awareness and help protect homes and families. In 1922, the National Fire Protection Association (NFPA) named the second week of October Fire Prevention Week in commemoration of the Great Chicago Fire in 1871.

DID YOU KNOW?

Installing reliable protection and being proactive is important to help keep your loved ones safe from a fire or carbon monoxide emergency.

- Almost **3 of every 5** home fire deaths resulted from fires with no smoke alarms or no working smoke alarms (NFPA)
- Carbon monoxide is the **#1 cause of accidental poisoning** in the US (CDC)
- Unattended cooking is the **#1 cause of home fires** (NFPA)
- A fire department responds to a fire every **23 seconds** in America (NFPA)

- Watch your cooking
 Stay in the kitchen when you are frying, grilling, or broiling food. If you must leave, even for a short time, turn off the stove.
- Give space heaters space
 Keep fixed and portable space heaters at least three feet from anything that can burn. Turn off heaters when you leave the room or go to sleep.
- Smoke outside
 Ask smokers to smoke outside. Have sturdy, deep ashtrays for smokers.
- Keep matches and lighters out of reach
 Keep matches and lighters up high, out of the

- reach of children, preferably in a cabinet with a child lock.
- Inspect electrical cords
 Replace cords that are cracked, damaged, have broken plugs, or have loose connections.
- Be careful when using candles
 Keep candles at least one foot from anything that can burn. Blow out candles when you leave the room or go to sleep.
- Have a home fire escape plan
 Make a home fire escape plan and practice it at least twice a year.

Fire Prevention

Key Fire Safety Tips: Continued

- Install smoke alarms

Install smoke alarms on every level of your home, inside bedrooms and outside sleeping areas. Interconnect smoke alarms throughout the home. When one sounds, they all sound.

- Test smoke alarms

Test smoke alarms at least once a month and replace batteries once a year or when the alarm “chirps” to tell you the battery is low. Replace any smoke alarm that is more than 10 years old.

- Install sprinklers

If you are building or remodeling your home, install residential fire sprinklers. Sprinklers can

contain and may even extinguish a fire in less time than it would take the fire department to arrive.

Fire Prevention

NFPA announces “Cooking safety starts with YOU! Pay attention to fire prevention” as official theme for Fire Prevention Week, October 8-14, 2023

July 10, 2023 – The National Fire Protection Association® (NFPA®) — the official sponsor of Fire Prevention Week™ for more than 100 years — has announced “Cooking safety starts with YOU! Pay attention to fire prevention™” as the theme for Fire Prevention Week, October 8-14, 2023. This year’s focus on cooking safety works to educate the public about simple but important steps they can take to help reduce the risk of fire when cooking at home, keeping themselves and those around them safe.

According to NFPA, cooking is the leading cause of home fires, with nearly half (49 percent) of all home fires involving cooking equipment; cooking is also the leading cause of home fire injuries. Unattended cooking is the leading cause of home cooking fires and related deaths. In addition, NFPA data shows that cooking is the only major cause of fire that resulted in more fires and fire deaths in 2014-2018 than in 1980-1984.

“These numbers tell us that more public awareness is needed around when and where cooking hazards exist, along with ways to prevent them,” said Lorraine Carli, vice president of the Outreach and Advocacy at NFPA. “This year’s Fire Prevention Week campaign will work to promote tips, guidelines, and recommendations that can help significantly reduce the risk of having a cooking fire.”

Following are cooking safety messages that support this year’s theme, “Cooking safety starts with YOU!

Pay attention to fire prevention”:

- Always keep a close eye on what you’re cooking. For foods with longer cook times, such as those that are simmering or baking, set a timer to help monitor them carefully.
- Clear the cooking area of combustible items and keep anything that can burn, such as dish towels, oven mitts, food packaging, and paper towels.
- Turn pot handles toward the back of the stove. Keep a lid nearby when cooking. If a small grease fire starts, slide the lid over the pan and turn off the burner.
- Create a “kid and pet free zone” of at least three feet (one meter) around the cooking area and anywhere else hot food or drink is prepared or carried.

“Staying in the kitchen, using a timer, and avoiding distractions that remove your focus from what’s on the stove are among the key messages for this year’s Fire Prevention Week campaign,” said Carli.

Fire Prevention Week is celebrated throughout North American every October, and is the oldest public health observance on record in the U.S. Entering it’s 101st year, Fire Prevention Week works to educate people about the leading risks to home fires and ways they can better protect themselves and their loved ones. Local fire departments, schools, and community organizations play a key role in bringing Fire Prevention Week to life in their communities each year and spreading basic but critical fire safety messages.

To learn more about Fire Prevention Week and this year’s theme, “Cooking safety starts with YOU! Pay attention to fire prevention,” visit www.fpw.org. Additional Fire Prevention Week resources for children, caregivers, and educators can be found at www.sparky.org and www.sparkyschoolhouse.org.

For this release and other announcements about NFPA initiatives, research and resources, please visit the NFPA press room.

About the National Fire Protection Association® (NFPA®)

Founded in 1896, NFPA® is a global self-funded nonprofit organization devoted to eliminating death, injury, property, and economic loss due to fire, electrical and related hazards. The association delivers information and knowledge through more than 300 consensus codes and standards, research, training, education, outreach and advocacy; and by partnering with others who share an interest in furthering the NFPA mission. For more information, visit www.nfpa.org. All NFPA codes and standards can be viewed online for free at www.nfpa.org/freeaccess.

Candle Safety

Candles may be pretty to look at but they are a cause of home fires – and home fire deaths. Remember, a candle is an open flame, which means that it can easily ignite anything that can burn.

“Candle with Care”

Blow out all candles when you leave the room or go to bed. Avoid the use of candles in the bedroom and other areas where people may fall asleep. Keep candles at least 1 foot (30 centimeters) away from anything that can burn.

Think about using flameless candles in your home. They

look and smell like real candles.

IF YOU DO BURN CANDLES, make sure that you....

Use candle holders that are sturdy, and won't tip over easily.

Put candle holders on a sturdy, unclutter surface.

Light candles carefully. Keep your hair and any loose clothing away from the flame.

Don't burn a candle all the way down – put it out before it gets close to the holder or container.

Never use a candle if oxygen is used in the home.

Have flashlights and battery-powered lighting ready to use during a power outage. Never use

candles.

Facts:

December is the peak month for home candle fires.

More than one-third of home candle fires started in the bathroom

Three of every five candle fires start when things that can burn are too close to the candle.

Candles and Kids

Never leave a child alone in a room with a burning candle. Keep matches and lighters up high and out of children's reach, in a locked cabinet.

FIRE SAFETY TIPS

- ✓ Make sure smoke alarms are present and working in your room
- ✓ Crouch low or crawl when escaping
- ✓ If clothes are on fire, dash to safe, drop and roll
- ✓ Unplug electrical appliances if not in use, avoid electrical overloading
- ✓ Never leave lighted candles unattended

Escape Planning

Plan Ahead! If a fire breaks out in your home, you may have only a few minutes to get out safely once the smoke alarm sounds. Everyone needs to know what to do and where to go if there is a fire.

SAFETY TIPS

Make a home escape plan. Draw a map. Of your home showing all doors and windows. Discuss the plan with everyone in your home.

KNOW at least two ways out of every room, if possible. Make sure all doors and windows leading outside open easily.

HAVE an outside meeting place (like a tree, light pole or mailbox) a safe distance from the home where everyone should meet.

PRACTICE your home fire drill at night and during the day with everyone in your home, twice a year.

PRACTICE using different ways out.

TEACH children how to escape on their own in case you can't help them.

Close doors behind you as you leave.

IF THE ALARM SOUNDS...

If the smoke alarm sounds, GET OUT AND STAY OUT. Never go back inside for people or pets.

If you have to escape through smoke, GET LOW AND GO under the smoke to your way out.

CALL the fire department from outside your home.

FACTS

A closed door may slow the spread of smoke, heat, and fire. Install smoke alarms inside every sleeping room and outside each separate sleeping area. Install alarms on every level of the home. Smoke alarms should be interconnected. When one smoke alarm sounds, they all sound.

According to an NFPA survey, **only one of every three** American households have actually developed and practiced a home fire escape plan.

While **71%** of Americans have an escape plan in case of a fire, only **47%** of those have practiced it.

One-third of American households who made an estimate thought they would have at least 6 minutes before a fire in their home would become life-threatening. The time available is often less. And only **8%** said their first thought on hearing a smoke alarm would be to get out!

Heating Safety

There is something about the winter months and curling up with a good book by the fireplace. But did you know that heating equipment is one of the leading causes of home fire deaths? With a few simple safety tips and precautions, you can prevent most heating fires from happening.

BE WARM AND SAFE THIS WINTER!

Keep anything that can burn at least three-feet (one meter) away from heating equipment, like the furnace, fireplace, wood stove, or portable space heater.

Have a three-foot (one meter) "kid-free zone" around open fires and space heaters.

Never use your oven to heat your home.

Have a qualified professional install stationary space heating equipment, water heaters or central heating equipment according to the local codes and manufacturer's instructions.

Have heating equipment and chimneys cleaned and inspected every year by a qualified professional.

Remember to turn portable heaters off when leaving the room or going to bed.

Always use the right kind of fuel, specified by the manufacturer, for fuel burning space heaters.

Make sure the fireplace has a sturdy screen to stop sparks from flying into the room. Ashes should be cool before putting them in a metal container. Keep the container a safe distance away from your home. Test smoke alarms at least once a month.

Heating Equipment Smarts

Install wood burning stoves following manufacturer's instructions or have a professional do the installation. All fuel-burning equipment should be vented to the outside to avoid carbon monoxide (CO) poisoning.

Install and maintain CO alarms to avoid the risk of CO poisoning. If you **smell** gas in your gas heater, do not

light the appliance. Leave the home immediately and call your local fire department or gas company.

FACT

Half of home heating fires are reported during the months of December, January, and February.

Fire Prevention

Smoking & Home Safety

The place where we feel safest – at home – is where most smoking-materials structure fires, deaths, and injuries occur. Smoking materials are the leading cause of fire deaths. Smoking material fires are preventable.

Smoking Safety

If you smoke, us only fire-safe cigarettes.

If you smoke, smoke outside. Most deaths result from fires that started in living rooms, family rooms and dens or in bedrooms.

Keep cigarettes, lighters, matches, and other smoking materials up high out of the reach of children, in a locked cabinet.

Put it Out

Use a deep, sturdy ashtray. Place it away from anything that can burn.

Do not discard cigarettes in vegetation such as mulch,

potted plants or landscaping, peat moss, dried grasses, leaved or other things that could ignite easily.

Before you throw away butts and ashes, make sure they are out, and dousing in water or sand is the best way to do that.

Smoking and Medical oxygen

Never smoke and never allow anyone to smoke where medical oxygen is used. Medical oxygen can cause materials to ignite more easily and make fires burn at a faster rate than normal. It can make an existing fire burn faster and hotter.

Electronic Cigarettes

Fires have occurred while e-cigarettes were being used, that battery was being charged, or the device was being transported. Batter failures have led to small explosions. Never leave charging e-cigarettes unattended. E-cigarettes should be used with caution.

Facts

The risk of dying in a home structure fire caused by smoking materials rises with age.

One out of four fatal victim of smoking-material fires is no the smoker whose cigarette started the fire.

Fire Prevention

Home Fire Sprinklers

Over 80% of fire deaths occur in the home. Home fire sprinklers can save lives and property from the fire. They respond quickly and effectively to fire, often extinguishing the fire before the fire department arrives. Only the sprinkler closest to the fire will activate, spraying water on the fire.

SAFETY TIPS

Home fire sprinklers save lives and property. In many situations, a family who has survived a fire will also have their "home" to live in and enough of the items and space in their home to continue living their lives as they did before.

The cost of a home fire sprinkler system in a new home average \$1.35 per sprinklered square foot totaling an amount similar to what is spent for carpet upgrades, paving stone driveway or a whirlpool bath. Source: Fire Protection Research Foundation Study 2013.

A home fire sprinkler system can reduce the

homeowner's insurance premium.

Fire departments typically use roughly 10 times as much water as a fire sprinkler would use to contain a fire.

Source: Fire Protection Research Foundation Study 2010.

Fire sprinklers are environmentally friendly. They can reduce the amount of water run-off and pollution, fire damage by up to 71%, and water usage to fight a home fire by as much as 91%.

Source: FM Global and Home Fire Sprinkler Coalition Study 2010.

Cigar smoke or burnt toast will not activate a fire sprinkler. Only the high temperature of a fire will activate the sprinkler.

A home fire sprinkler system is easy to maintain. Just inspect your home to make sure the sprinklers are not blocked by something that would prevent the water from coming out such as paint and be sure the main control valve is never turned off.

Home fire sprinklers are effective in cold and warm climates. Guidelines have been created for the proper installation of systems to avoid pipes freezing. A home fire sprinkler system should be winterized the same as you winterize a domestic water supply.

And Don't Forget...

If MOVING into an apartment or condominium building, make sure common areas and individual apartments are sprinklered.

If BUILDING a new home or remodeling an existing home, consider installing a home fire sprinkler system.

FACTS

- More than 2,500 people die in home fires each year.
- If a home fire occurs, the risk of dying decreases by about 80% when the home is equipped with a fire sprinkler system.

Cooking brings family and friends together, provides an outlet for creativity and can be relaxing. But did you know that cooking fires are the number one cause of home fires and home injuries? By following a few safety tips, you can prevent these fires.

“Cook with Caution”

- Be on alert! If you are sleepy or have consumed alcohol don't use the stove or stovetop.
- Stay in the kitchen while you are frying, boiling, grilling, or broiling food. If you leave the kitchen for even a short period of time, turn off the stove.
- If you are simmering, baking, or roasting food, check it regularly, remain in the home while food is cooking, and use a timer to remind you that you are cooking.
- Keep anything that can catch fire — oven mitts, wooden utensils, food packaging, towels or curtains — away from your stovetop.

If you have a small (grease) cooking fire and decide to fight the fire...

- On the stovetop, smother the flames by sliding a lid

over the pan and turning off the burner. Leave the pan covered until it is completely cooled.

- For an oven fire, turn off the heat and keep the door closed.

If you have any doubt about fighting a small fire...

- Just get out! When you leave, close the door behind you to help contain the fire.
- Call 9-1-1 or the local emergency number from outside the home.

Cooking and Kids

Have a “kid-free zone” of at least 3 feet (1 meter) around the stove and areas where hot food or drink is prepared or carried.

FACTS

- The leading cause of fires in the kitchen is unattended cooking.
- Most cooking fires in the home involve the kitchen stove.
